Workshop C9: Near-term crop yield forecasts to mitigate production risks

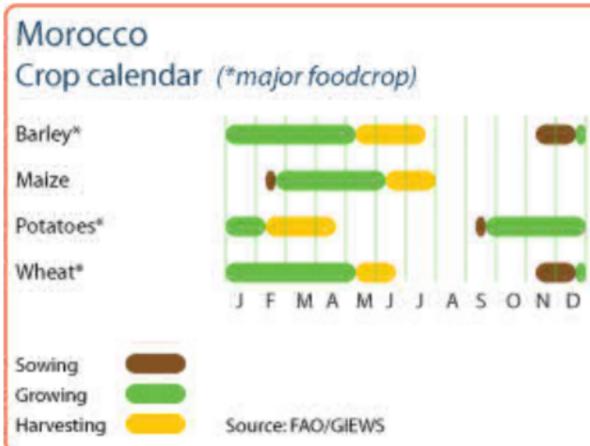

Wednesday 11 October, 4:00pm, Room 233

# Forecasting Moroccan Wheat Yields using Two Statistical Models

Frank Wechsung, Peter Hoffmann,  
Katja Frieler

(Potsdam Institute for Climate Impact  
Research (PIK), Germany)

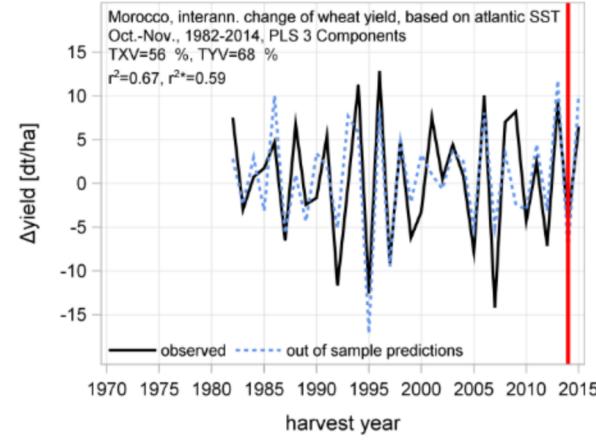

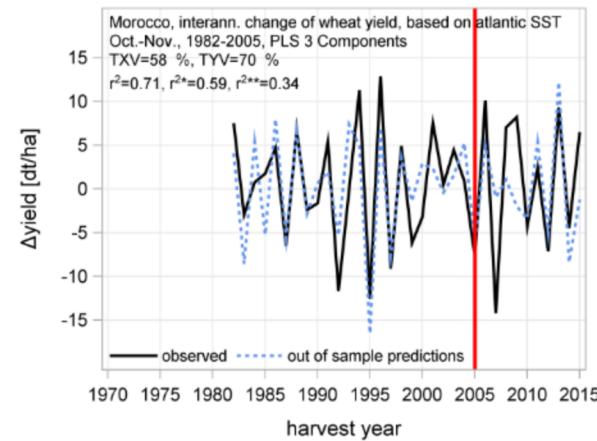

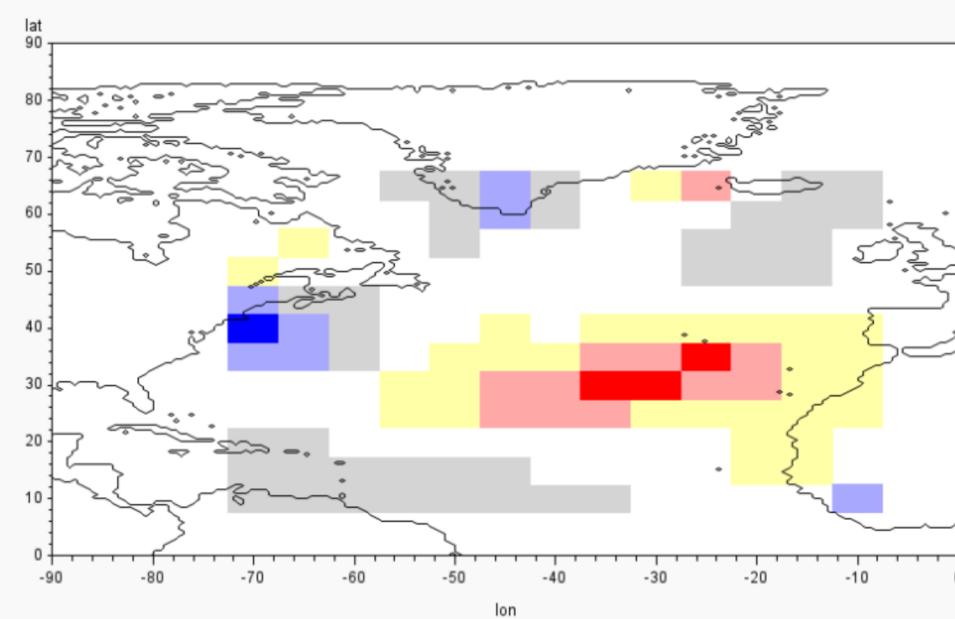

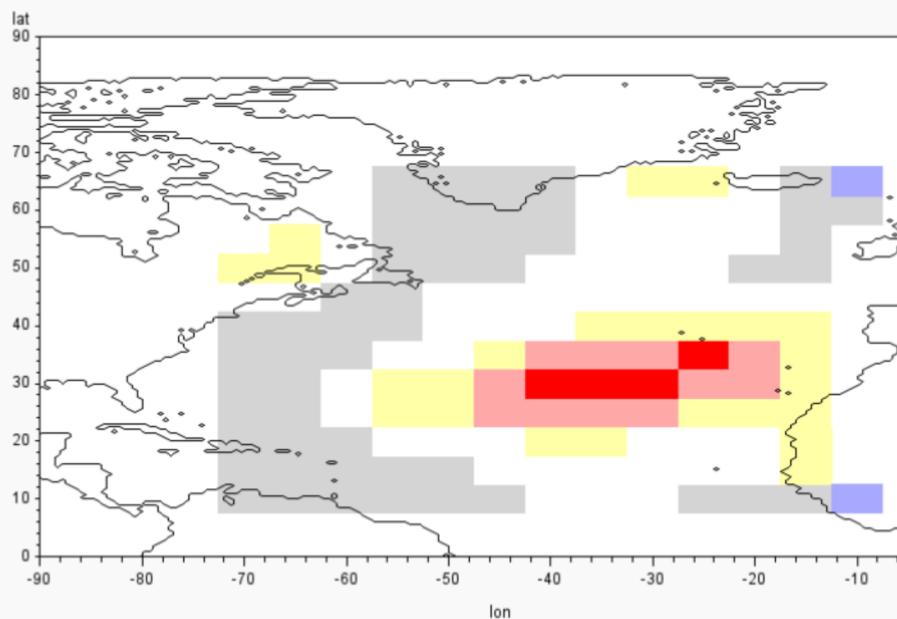

# Marocco wheat

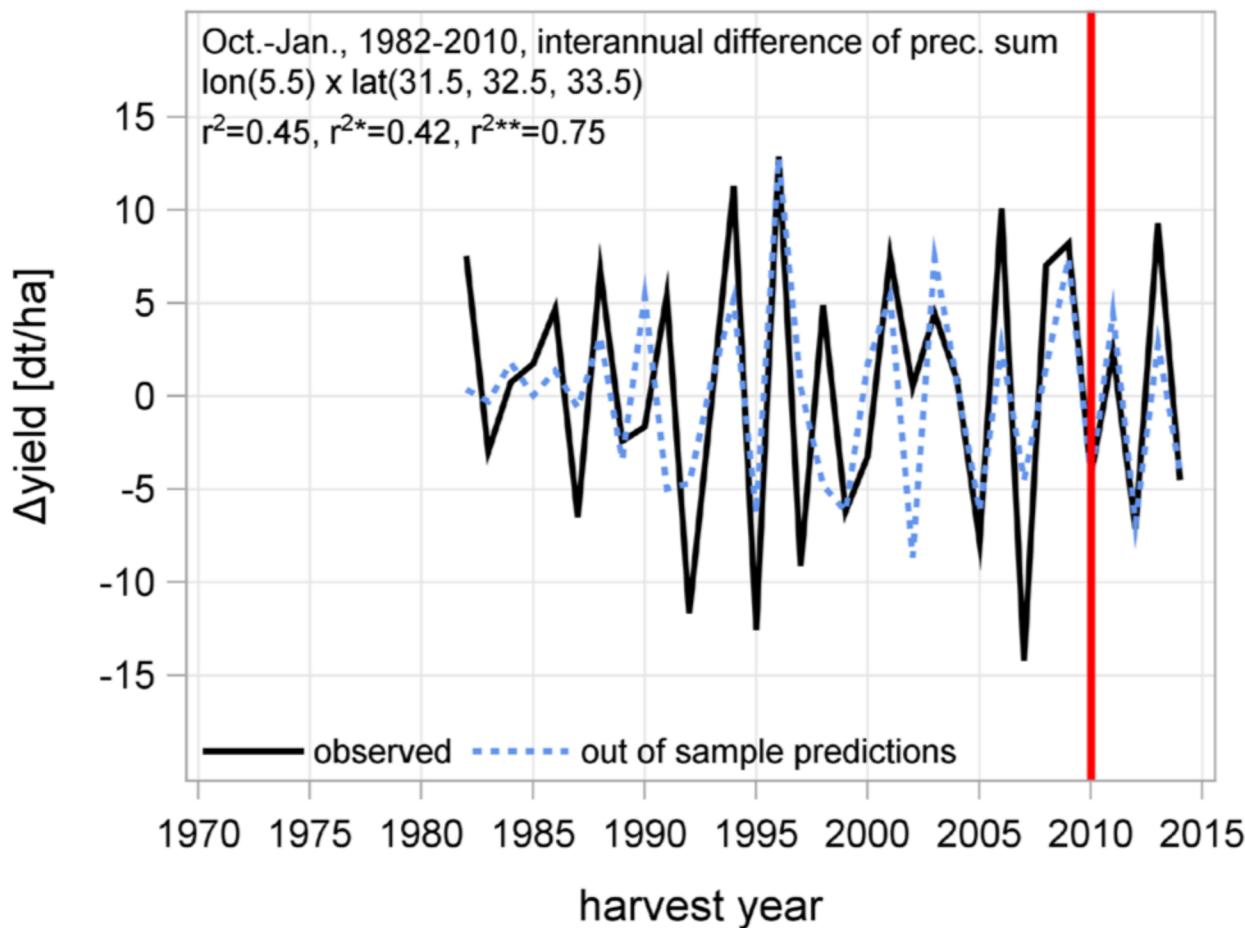

Model Pre-Planting :  $\Delta y = f(\Delta \text{SST} | \sum \text{ON})$ , f- Partial Least Square Regression

Model Mid-Season :  $\Delta y = f(\Delta P | \sum \text{ONDJ})$ , f- Linear Regression

# Model Pre-Planting : $\Delta y = f(\Delta \text{SST} \mid \Sigma \text{ON})$

# Model Mid-Season: $\Delta y = f(\Delta P \quad | \sum \text{ONDJ})$

# Outlook

- Publication
- System upgrade in 2018
- Extension to other African countries
